Subject: Testimony on Forsythe's "Eco Logo" Approved Power Flo Hydraulic Fluid

We first discovered Forsythe's Power Flo hydraulic fluid at the 2005 Waste Expo in Las Vegas, NV. The most impressive benefits are the water solubility, Eco Logo Environmental Certification and fire resistance of Power Flo that are not available in conventional hydraulic fluids.

In January 2006 we converted (2) RJM and (1) JV compactors from mineral oil to Power Flo, and are completely thrilled. Power Flo has proven itself successful in sub-zero winter temperatures, significantly reduces environmental clean up costs, hazardous risk of fire and provides safety for our customers and employees ~ Power Flo is truly the environmental solution for fleet managers of mobile hydraulic equipment.

This spring 2007, we intend to convert a McNeilus Atlantic Series Front Loader to Power Flo hydraulic fluid, due to the increasing environmental requirements and 'due diligence' the government is mandating.

Sincerely,

Rick Frade
President
