Forsythe Lubrication
120 Chatham St.
Hamilton, ON, L8P 2B5

Attention: Ron Arbour – Technical Sales/Service Representative
Subject: Power Flo Hydraulic Fluid

Dear Ron,

Forsythe's Power Flo hydraulic fluid has been approved as a replacement for our existing VG 32 hydraulic oil. It will be available as a Non Standard Option (NSO) to customers requesting it.

A year long trial was conducted with Power Flo on an Expert 2000 Sideloader at Muskoka Containerized Services (WSI) in Bracebridge, Ontario. The trial was to monitor fluid temperature, component wear, and overall vehicle performance using Power Flo. With over 2500 hours on the fluid, the results proved a significant reduction in operating temperature, quieter pump conditions, experience no system leaks or downtime, and no significant wear of the components.

We will continue to test and gather more data from Higher Temperature operating systems in the Automizer Right-Hand™ Sideloader with customer assistance from the City of Greensboro, NC.

Our major suppliers of components have agreed to the usage of Power Flo, and from what we have collected so far, the seals and pumps are proven to be fine.

In conclusion, we are pleased to offer this new product to our existing customers, and we are looking forward to new opportunities as well.

Best regards,

A handwritten signature in cursive script that reads "Marc Nadeau".
